

Varistor EOPMS

Employee Operations & Performance Management — UI/UX Specification

White · Lime Green · Green theme

HOW TO READ THIS DOCUMENT-

One module per screen — built for hand-off:

Each of the 15 modules below shows an annotated wireframe followed by a UI developer checklist. The wireframe blocks are labelled with the component name and a short purpose note. Use the checklist as your build spec — spacing, behaviour, states and data points are all called out so a developer can implement the screen at a glance without re-reading long paragraphs.

Visual language:

Surface: white cards on page background; 12px radius; 1px border.

Primary action / accent: Lime with ink-black text.

Secondary: Lime-tint chip with text used for badges, success, Vari Points.

Typography: Inter or Helvetica. Headings 600–700 weight, body 400, caption 8.5–9px in muted.

Spacing: 8px base unit; cards padding 16–20px; section gap 24–32px.

Iconography: Lucide line icons, 1.5px stroke, ink colour, 18–20px.

Motion: 150–200ms ease-out for hover/press; modal fade+scale 0.97→1.

Internal - UI/UX Reference Blueprint

Varistor – Employee Operations & Performance Management System

A single internal platform replacing scattered HR tools, WhatsApp groups, Excel payroll and ad-hoc task lists. This document is the visual specification handed to the UI/UX team — every numbered module from the brief is shown as a wireframe with annotated behaviour.

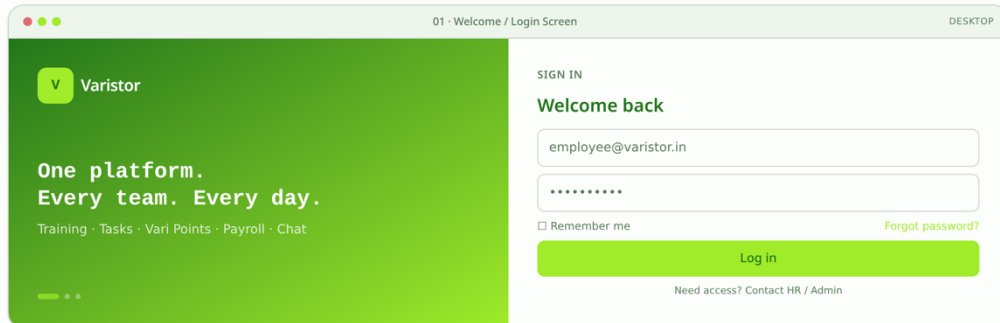

40 employees · 6 departments 16 modules 4-phase roadmap Mobile + Desktop

2 Finance	10 Sales	12 Operations (10 + 2 heads)	2 Tech Dev
5 Digital Marketing	2+ HR / Admin	1 CEO / COO	6 Departments total

SECTION 1

Modules & Wireframes

Every numbered requirement from the brief mapped to a screen. Wireframes use semantic tokens — your designers can swap in Varistor's brand colours, illustrations and typography while keeping the layout intact.

MODULE 01

Welcome / Login Screen:

Single-screen split layout: brand panel left, sign-in form right. Entry point for all 40 employees.

UI developer checklist:

- Split 50/50 on desktop; brand panel collapses above the form on mobile.
- Form validation inline (red-orange error text under each field) — never alert popups.
- Login posts to **/api/auth/login**; on success route to **/dashboard** (or **/admin** for admins).
- Disable LOG IN button + show spinner during request; re-enable on response.
- Forgot password opens a modal: email field + Send reset link CTA in lime.

MODULE 02

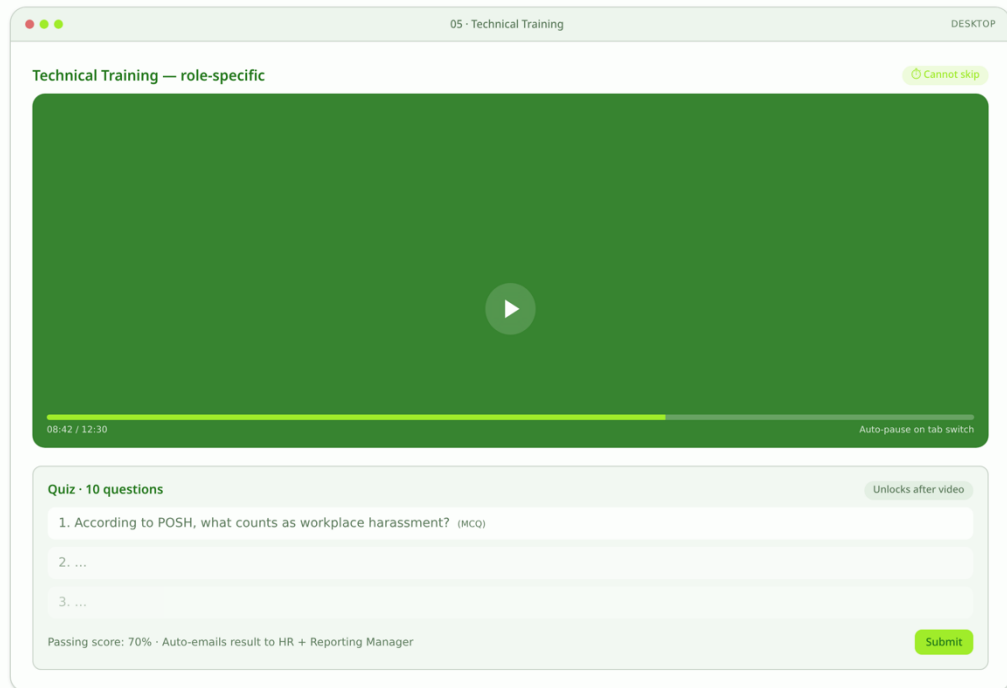

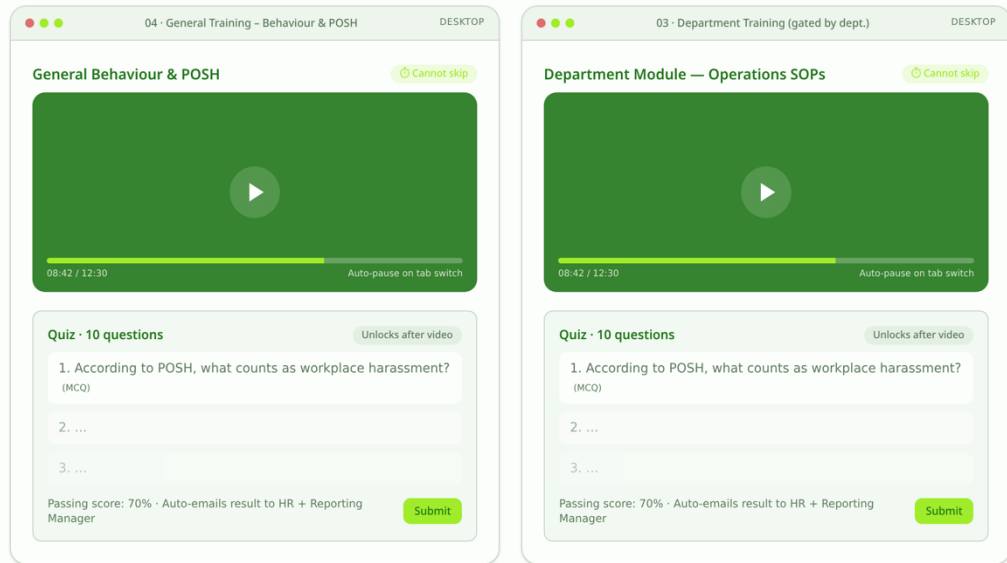

Admin Panel — Create Employee

HR/Admin only. Sidebar nav + form to add a new joiner and auto-email credentials.

UI developer checklist

- Sidebar fixed 220px; active item uses lime-tint background + ink text + 3px lime left bar.
- Form is a 2-column grid (gap 24px); collapses to 1 column under 768px.
- On submit: generate temp password, create user in DB, email creds via Resend, log activity.
- Show success toast (lime-tint bg, ink text, checkmark icon) bottom-right, auto-dismiss 4s.
- Audit trail: every create/edit/delete writes to **activity_log** visible only to admins.

The screenshot shows the 'Create new employee' form in the Varistor EOPMS Admin Panel. The top navigation bar includes the logo 'v Varistor EOPMS UI/UX SPEC REPORT V1.0' and links for Overview, Modules & Wireframes, Recommended Tools, Automation Map, Workflow Improvements, and 4-Phase Roadmap. The left sidebar, under the 'ADMIN' section, lists: Employees (active), Departments, Training modules, Payroll setup, and Audit log. The main form area is titled 'Create new employee' with an 'Admin only' badge. It contains a 2-column grid of input fields: Full name, Employee ID, Username, Temporary password, Personal email, and Phone. Below these is a Department dropdown menu (currently showing 'Select...') and a Reporting manager field. The Department dropdown has a list of options: Finance, Sales, Operations, Ops Heads, Tech, and Digital Marketing. At the bottom right of the form are 'Cancel' and 'Create & send credentials' buttons.

06 · Quiz results pipeline: On submission, scores for both quizzes are written to the employee profile and emailed automatically to *HR* and the *Reporting Manager*. A retake is allowed once if score < 70%; second failure escalates to HR. After both modules pass, the employee is redirected to the Dashboard (next screen).

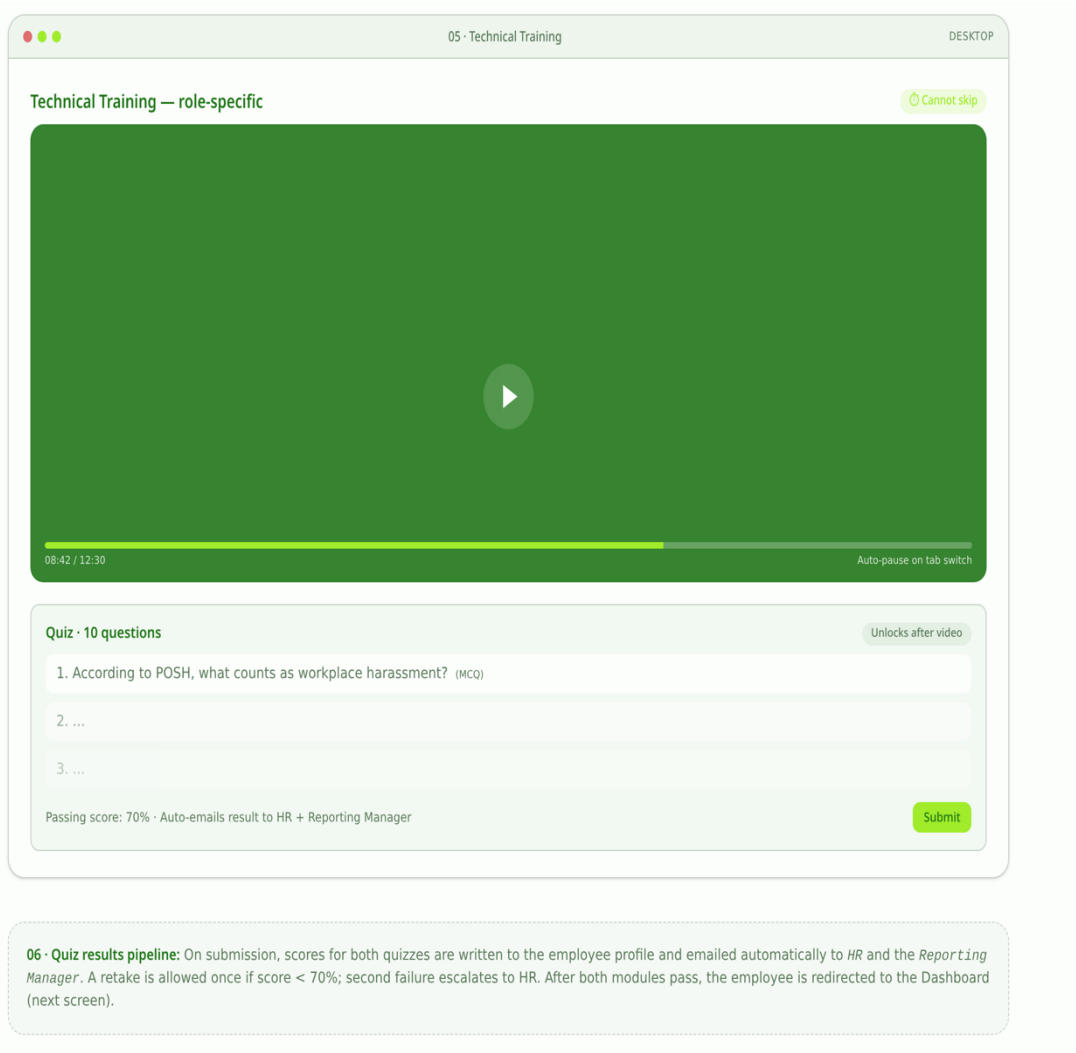

MODULE 03

Training Library — Gated Modules

3 tracks: General, Department, Tech. Cards locked until the previous is passed.

UI developer checklist

- Each card: 16:9 thumbnail · title · duration · status badge · CTA button.
- Lock state: 50% opacity thumbnail, no CTA, tooltip on hover explains prerequisite.
- On completion of quiz with $\geq 70\%$, optimistically unlock the next card with a 300ms fade.
- Video player blocks seek-ahead (disable progress bar drag) — see Module 04.
- Progress bar uses lime fill on white track, 4px height, full-width across card footer.

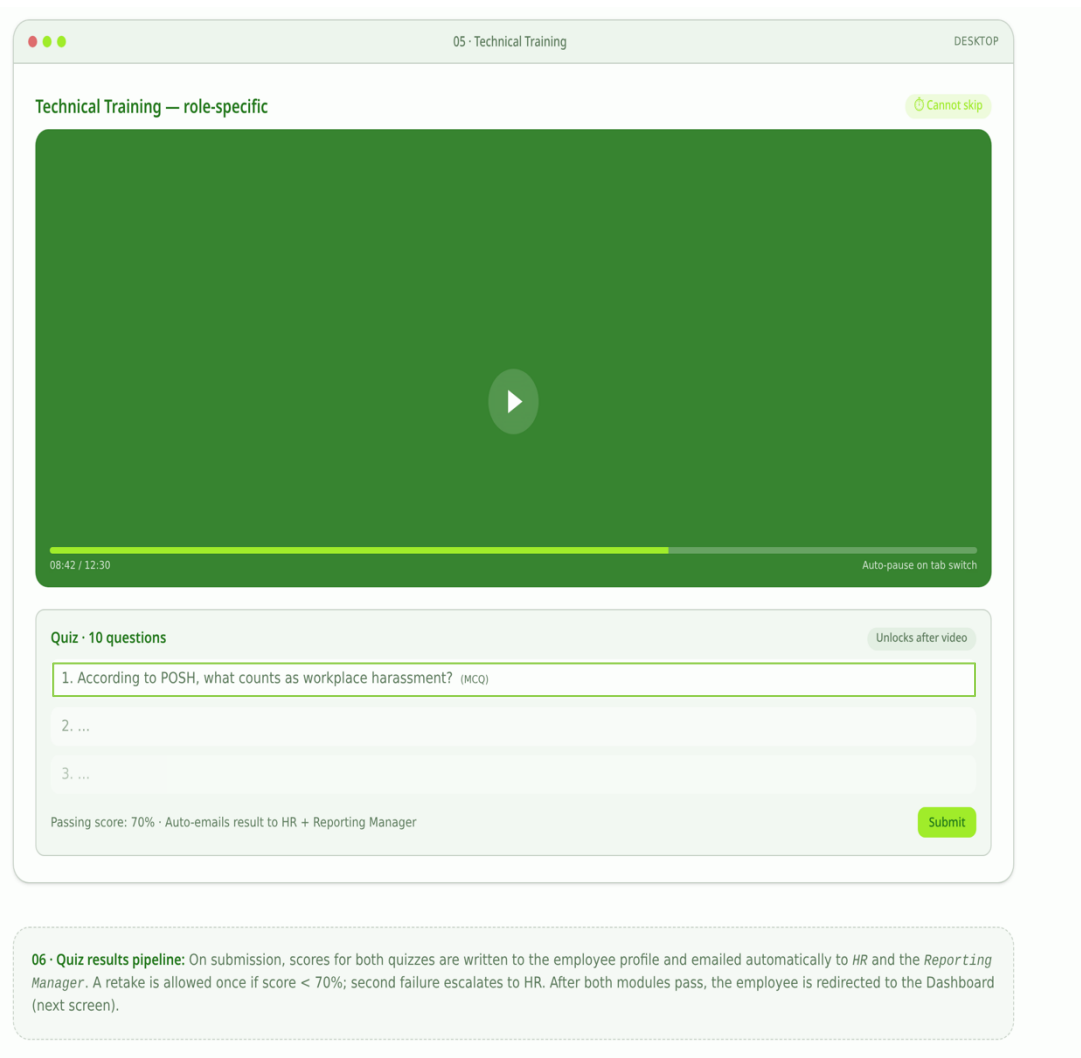

MODULE 04

Video Player — No-Skip Logic

Full-bleed video, custom controls. Forward seek disabled until first watch complete.

UI developer checklist

- Use **Mux** or **Cloudflare Stream** for HLS + secure playback tokens.
- Track **watched_seconds** server-side every 5s; only allow seek after **watched_seconds** $\geq$ duration.
- On 100% watched, fire **video.completed** event $\rightarrow$ unlocks the quiz CTA (lime button slides in).
- Mobile: tap-to-show controls overlay; double-tap left/right disabled to enforce no-skip.
- Subtitles WebVTT, toggle persists per user.

MODULE 05

Quiz Screen

One question per screen, MCQ format, instant pass/fail with retry.

UI developer checklist

- Selected option: lime border 2px + lime-tint background.
- On submit final question → score screen: gauge + Pass/Retry CTA + email summary auto-sent.
- Pass $\geq 70\%$: confetti animation (lime + white particles), unlock next module.
- Fail: show correct answers, allow retry after 24h cooldown (server-enforced).
- Persist answers per question so accidental reload doesn't lose progress.

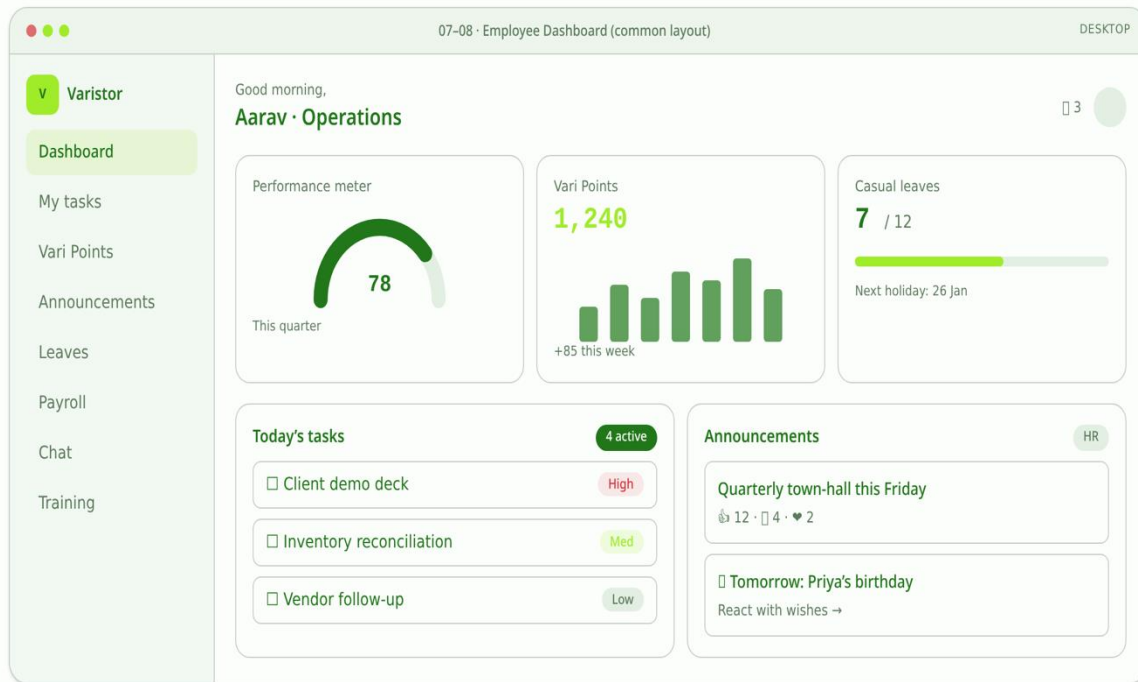

MODULE 06

Employee Dashboard

Personal home: KPIs, Vari Points, today's tasks, birthdays, announcements.

UI developer checklist

- Dashboard is a 3-column grid (24px gap) with 12-col fallback for tablet.
- Gauge: SVG arc 180°, animate stroke-dashoffset on mount (600ms ease-out).
- Birthday card auto-appears between 00:00–23:59 on user's birthday; can be dismissed but reappears next year.
- All cards: white bg, 12px radius, 1px border #D8DED2, shadow-sm (0 1px 2px rgba(0,0,0,0.04)).
- Sidebar collapses to icons-only at <1024px; full overlay drawer on mobile.

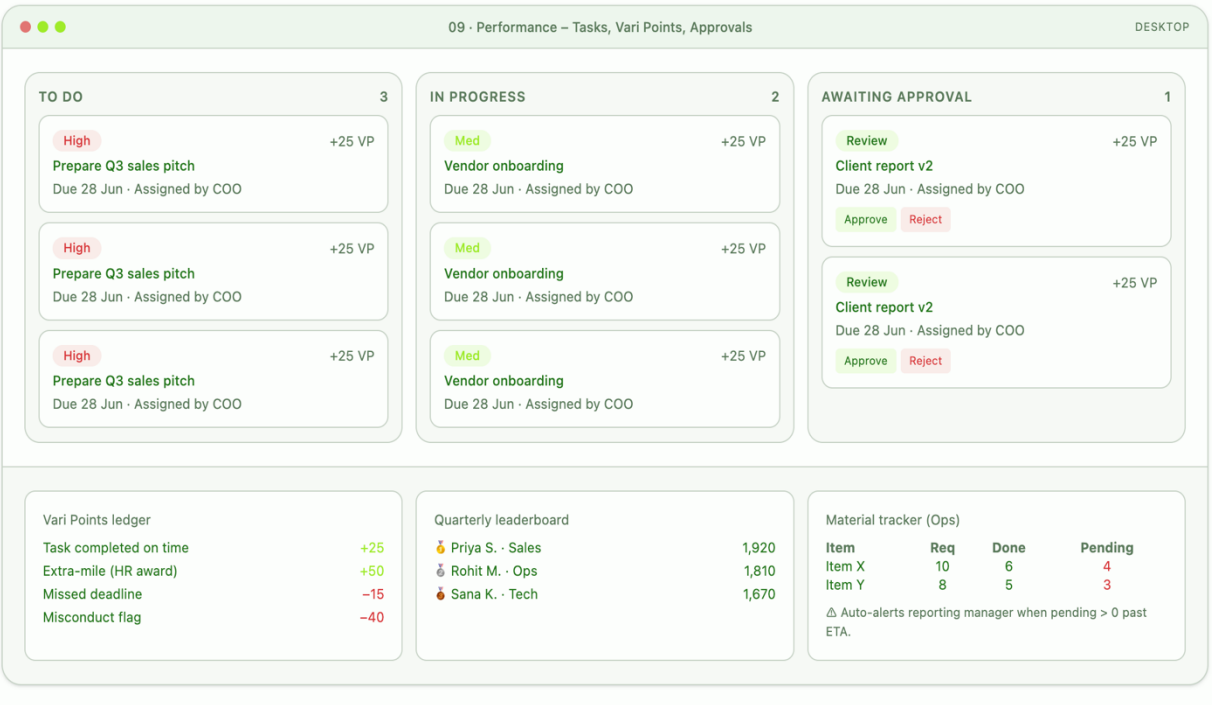

MODULE 07

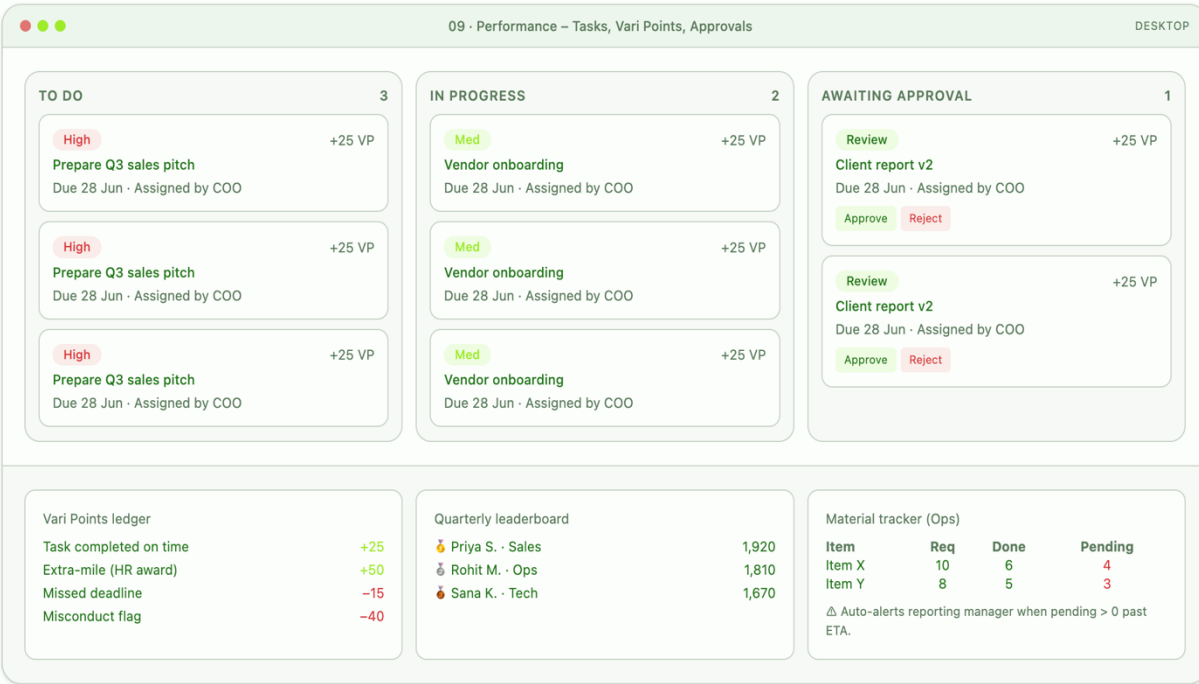

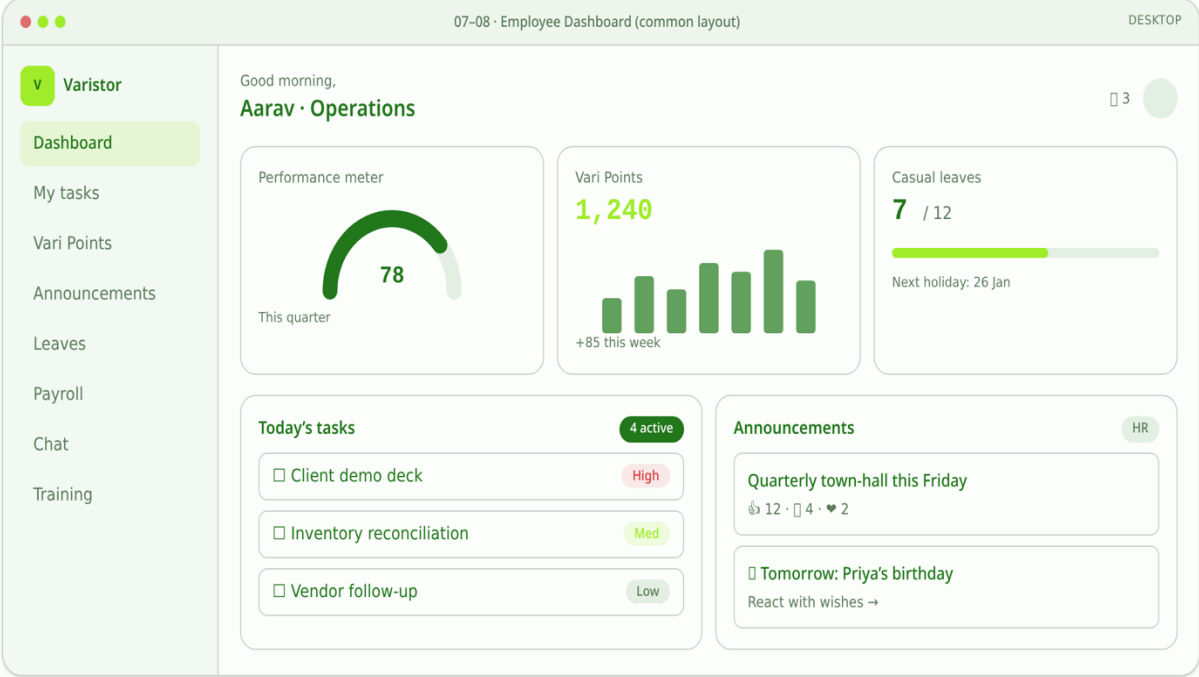

Task Kanban Board

3 columns: To Do · In Progress · Done. Drag-and-drop with Vari Point rules.

UI developer checklist

- Task card: title (14px bold) · due date chip · assignee avatar · priority dot (lime/amber/red).
- Drag uses dnd-kit; placeholder shows dashed lime outline at drop target.
- Move to Done **before** due date → **+10 Vari Points**; after due date → **-5**. Trigger toast on each.
- Card click opens right-side drawer (480px) with description, checklist, comments, attachments.
- Empty column shows soft illustration + 'Drop tasks here' helper text.

MODULE 08

Vari Points Ledger

Transparent points history with credit/debit reasons and monthly summary.

UI developer checklist

- Task card: title (14px bold) · due date chip · assignee avatar · priority dot (lime/amber/red).
- Drag uses dnd-kit; placeholder shows dashed lime outline at drop target.
- Move to Done **before** due date → **+10 Vari Points**; after due date → **-5**. Trigger toast on each.
- Card click opens right-side drawer (480px) with description, checklist, comments, attachments.
- Empty column shows soft illustration + 'Drop tasks here' helper text.

MODULE 09 & 10

Hall of Fame & Announcements

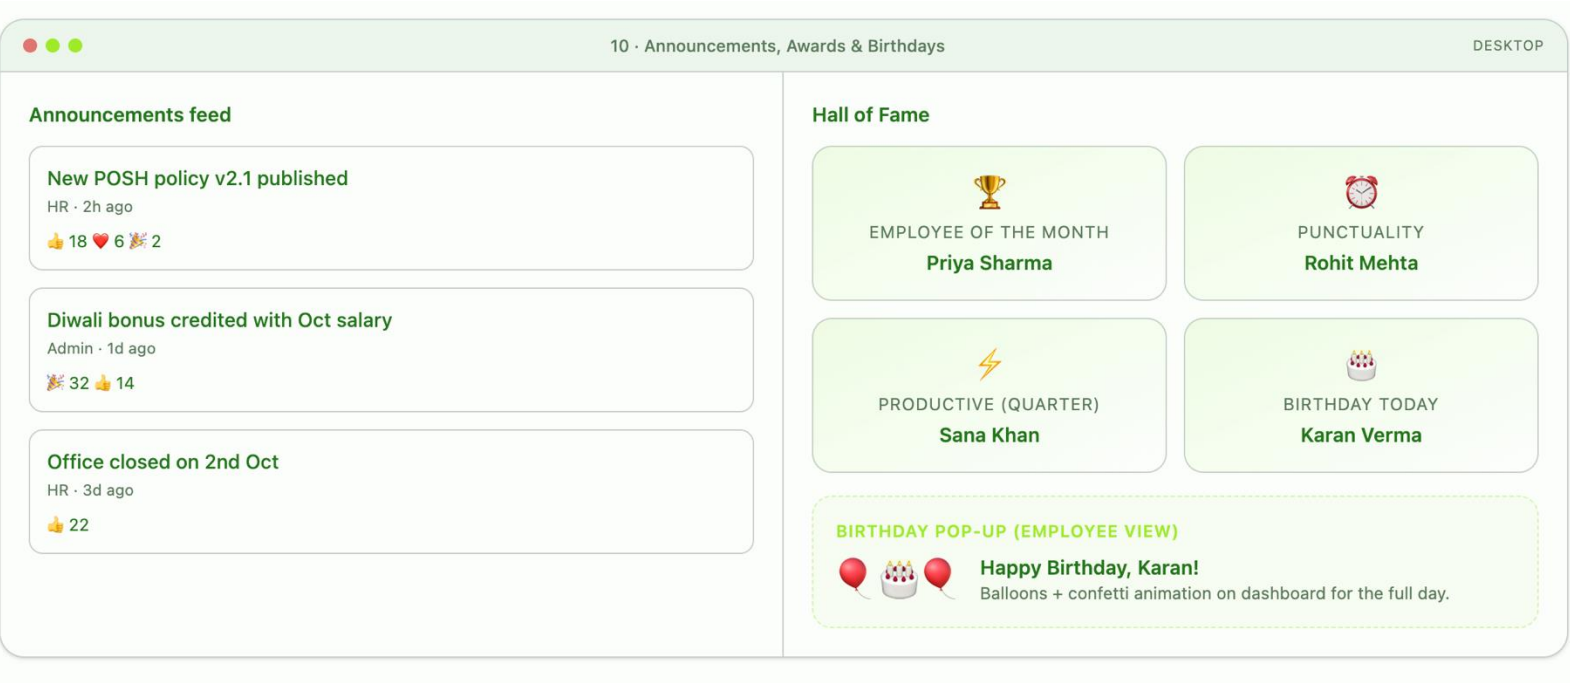

Company-wide recognition: Employee of the Month, milestones, announcements feed.

Notifications & Birthday Pop-up

Global bell with grouped notifications + auto-popping birthday celebration.

UI developer checklist

- Award cards: lime-tint to white gradient, 16px radius, trophy icon top-right.
 - Admin can post announcements with rich text + image; appears on dashboard too.
 - Pin important announcements to top (lime ribbon left edge).
 - Like/clap reaction on announcements stored as counts.
-
- Birthday popup uses Framer Motion: scale 0.9→1, opacity 0→1, balloons floating loop.
 - Notifications grouped by type with collapse/expand; persist read state per device.
 - Push via Web Push API for desktop; in-app + email for everything else.
 - Bell badge animates pulse on new notification arrival.

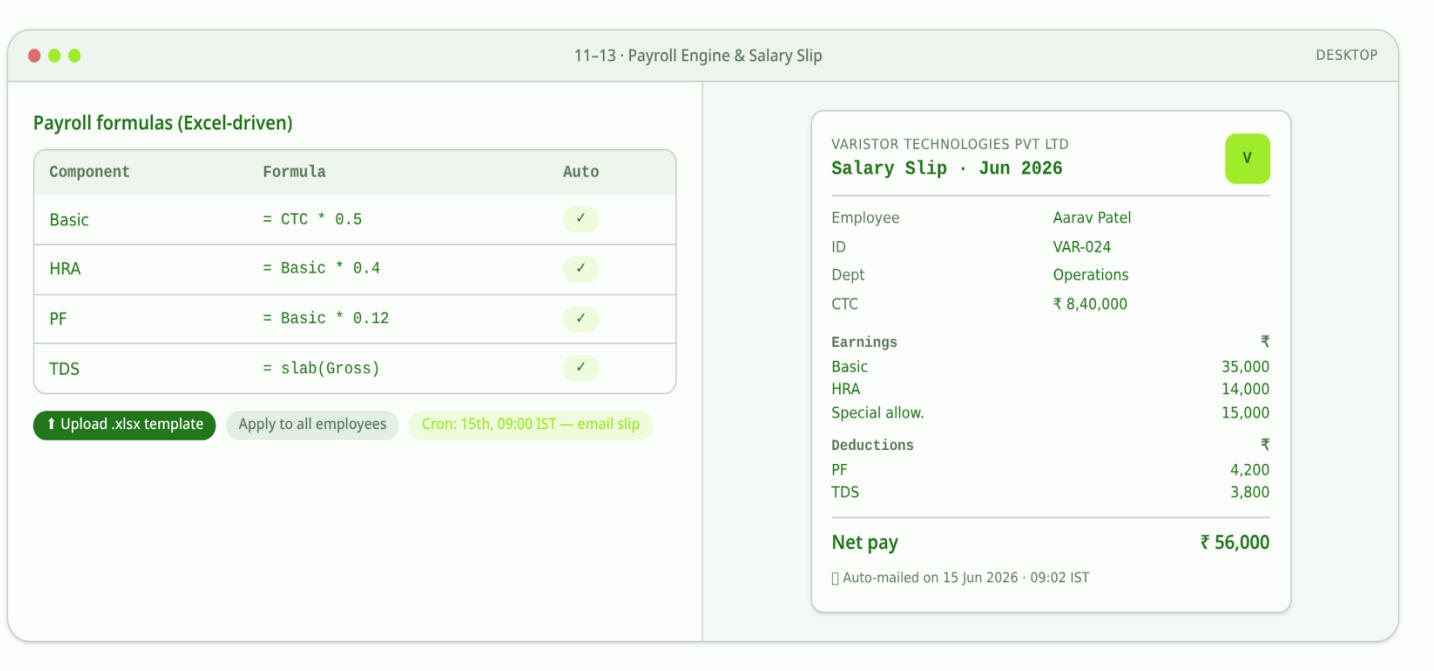

MODULE 11 & 12

Payroll — Salary Engine (Admin)

Excel-driven formulas: base + allowances – deductions = net. Bulk-process all 40 employees.

Salary Slip (Employee View)

Read-only PDF-style slip, downloadable. Lime header strip with logo.

UI developer checklist

- Use a virtualized table (TanStack Table) 40 rows now, scales to 400.
 - Cells calculate via shared util `computeNet({base, hra, ...})` — single source of truth.
 - Lock the sheet after Approve; further edits require Admin role + create a new revision.
 - Auto-schedule slip emails for the **15th of each month at 10:00 IST** via cron + Resend.
 - Audit log captures who approved and exact totals.
-
- Server renders PDF via `@react-pdf/renderer` using the same component tree.
 - Email body links to `/payroll/slip/:id` (signed URL, expires in 7 days).
 - Show only this user's slips; enforce row-level access in API.
 - Print stylesheet hides nav and ensures A4 layout.

MODULE 13

Leave Management

Apply leave, see balance, approval workflow with manager.

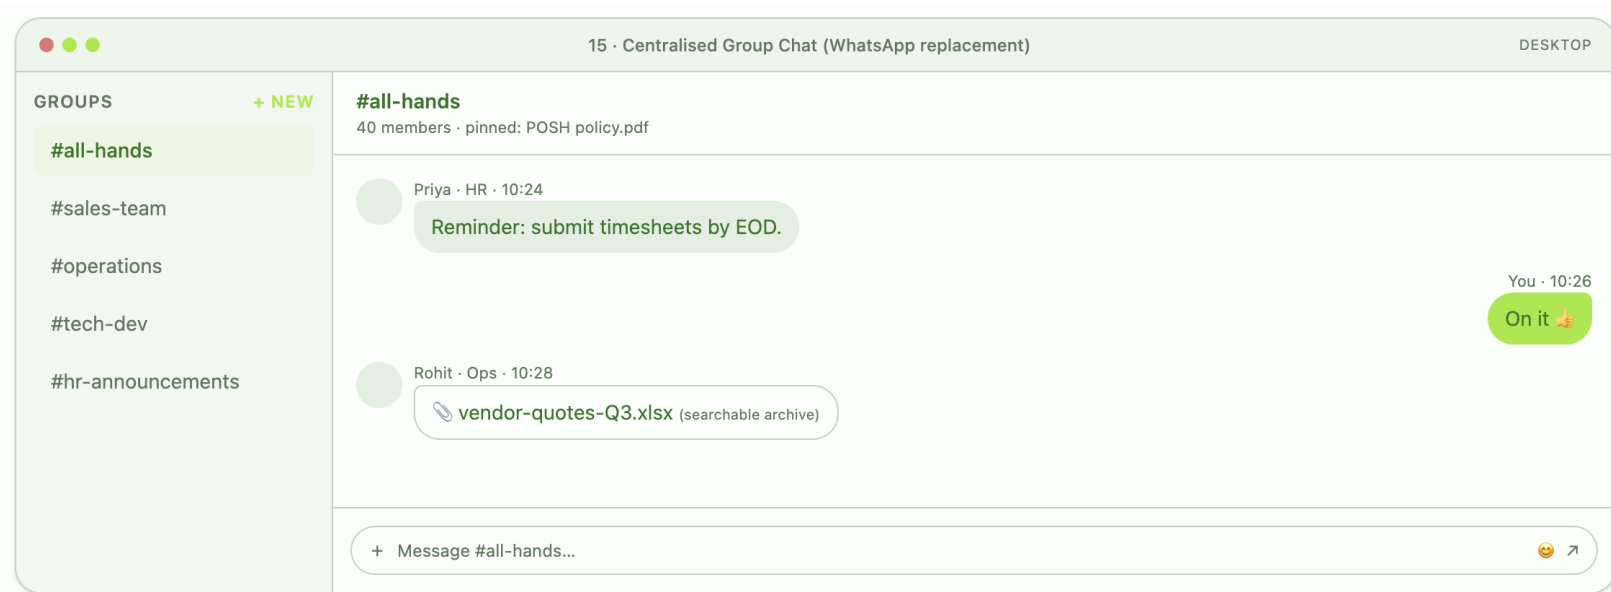

UI developer checklist

- Date picker disables weekends + public holidays (from holidays table).
- On submit: status Pending; notification to reporting manager via in-app + email.
- Manager view (same screen, different role) shows Approve / Reject buttons inline.
- Approved leave auto-blocks calendar and reduces balance; rejection requires a comment.
- Status pill colours: lime (approved), soft-grey (pending), red-orange (rejected).

MODULE 14

Group Chat / Channels

Slack-style channels per department + DMs. Active channel highlighted.

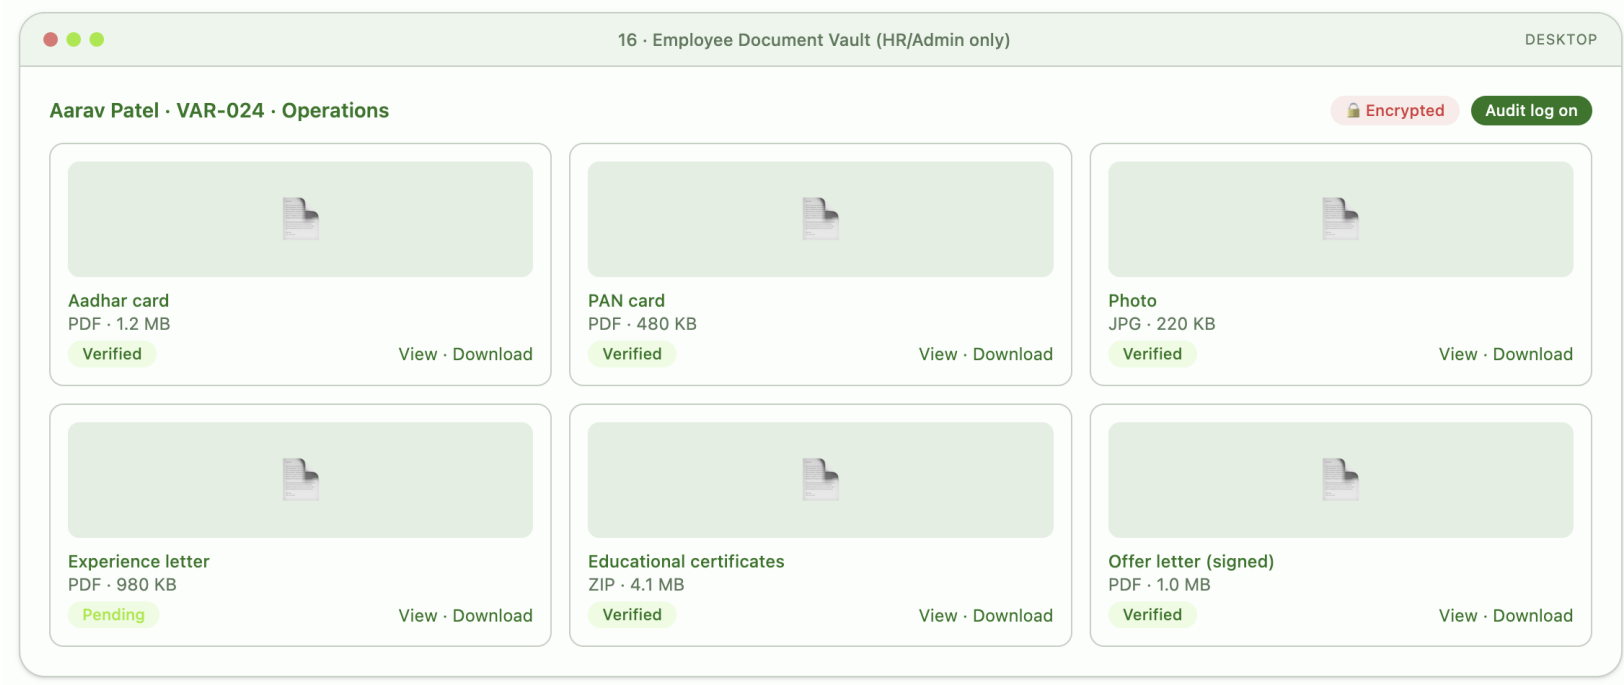

UI developer checklist

- Active channel: lime-tint background + ink text + lime left bar (3px).
- Use Supabase Realtime (or Ably) for live messages; optimistic UI on send.
- Mentions @name trigger in-app notification + email if user offline >10min.
- Show typing indicator (3 dots) below thread.
- File attachments stored in /storage/chat//.

MODULE 15

HR Document Vault

Per-employee folder of offer letter, photo, education certificates. HR + Admin only.

UI developer checklist

- Access guard: only roles HR + Admin can hit /vault/*; redirect others to /403.
- Files stored encrypted at rest; signed URLs expire 5 minutes after generation.
- Each card shows: filename, uploaded date, uploaded by, Download + Delete (admin only).
- Activity log shows every view/download for compliance.
- Mobile: list collapses; tap employee opens full-screen profile view.

Recommended Tools & Tech Stack

A pragmatic mix of build-in-house (core modules tied to Vari Points / payroll formulas) and integrate-third-party (where mature SaaS beats reinventing the wheel).

CAPABILITY	RECOMMENDED APPROACH	WHY
Auth & SSO	Built-in email/password + Google SSO	Fits 40-person org; no extra licensing
Training video hosting	Mux / Cloudflare Stream + custom player	Reliable progress events for 'no-skip' enforcement
Quiz engine	Custom (questions stored in DB)	Tight coupling to training completion + email triggers
Task / Vari Points	Custom Kanban + ledger table	Points logic is unique to Varistor — must be in-house
Material tracker	Custom (lightweight inventory)	Auto-alerts feed reporting manager
Announcements & reactions	Custom feed	Single source of truth for HR comms
Payroll calc & slips	Custom (xlsx upload → formula engine → PDF)	Indian payroll specifics + 15th-of-month cron email
Email delivery	Lovable Emails / Resend	Reliable salary-slip + result delivery
Leave management	Custom	Tied directly to dashboard balance widget
Group chat	Custom realtime channels (or integrate Rocket.Chat)	Searchable archive replaces WhatsApp
Document vault	Encrypted object storage + RBAC	Compliance for Aadhar/PAN — HR/Admin only
Notifications	In-app + email + (optional) WhatsApp Business API	Birthday / deadline / approval alerts
Analytics	Embedded charts (performance, leaderboard)	No external BI needed at this scale

Automation Opportunities

Every recurring manual task in the current workflow has been mapped to a trigger → action pair. These are the cron jobs and event hooks the platform must ship with.

🎓 Training completion → HR + Manager email with score

Event-driven

✉️ Salary slip emailed to all employees on 15th @ 09:00 IST

Cron

🎂 Birthday banner + balloons on dashboard for the day

Daily cron

🎉 Birthday reminder pushed to managers 1 day in advance

Daily cron

🕒 Task deadline overdue → -15 Vari Points + employee notify

Scheduled check

✅ Task approved by manager → +VP credited to ledger

Event-driven

📦 Material pending past ETA → alert reporting manager

Scheduled check

📊 Quarterly: auto-pick 'Productive Employee' from leaderboard

Quarterly cron

🏆 Monthly: 'Employee of the Month' workflow draft for HR approval

Monthly cron

NEW New employee created → credentials emailed + onboarding tasks seeded

Event-driven

📎 New chat attachment → indexed for search across the org

Event-driven

🚨 Misconduct flag by HR → VP deduction + employee email + audit log

Event-driven

Thank You
